What you need to know about: COVID-19 Omicron Variant
COVID-19 cases are rising again. If you haven’t been vaccinated, do it now.

- **What is the COVID-19 Omicron variant?**
  - There are many strains or “variants” of COVID-19 virus because the virus can change every time it passes from one person to another.
  - The new “Omicron” variant was detected in November and is spreading in many countries including the United States.
  - Arizona surveillance testing has detected cases in Pima County including the Tohono O’odham Nation.
  - Omicron is more contagious than most previous variants.
  - Being fully vaccinated AND boosted is your best protection against Omicron.
  - If Omicron is resistant to vaccines, we have the tools to update the vaccines.

- **Am I at risk of getting sick from the Omicron variant? Yes.**
  - Wear a facemask in ALL indoor public areas, even if you are vaccinated.
  - Avoid crowds and gatherings.
  - Make your holiday plans safer this year. Celebrate outdoors.
  - Get tested if you have symptoms, have an exposure, or must meet with others.
  - Vaccination is the best way to protect yourself and your family.

- **Who should get COVID-19 vaccination?**
  - All children ages 5 years and older
  - All adults
  - All persons who are pregnant, breastfeeding, or trying to get pregnant.

- **Who should get a COVID-19 vaccine booster?**
  - Everyone ages 16 years and older should get a booster shot.
  - Booster doses help build immunity and should be given:
    - At least 6 months after the 2nd dose of Moderna or Pfizer
    - 2 months after the single dose of Janssen

**Need help finding a COVID-19 vaccine?**
